

## Quick Start Guide v3.0

### What is OrangePulse?

OrangePulse is an advanced DCA (Dollar Cost Averaging) trading bot for TradingView. It automatically manages your positions using a Base Order (BO) and multiple Safety Orders (SO) to average down during dips and take profit on recovery.

#### ✨ Key Features

- ✓ 4 Entry Strategies: MeanReversion, TrendPullback, Breakout, MicroBreakout
- ✓ Smart DCA: Auto-scaling Safety Orders with configurable ladder
- ✓ Advanced Exits: TP%, Trail TP (3-stage), TP/SL at Price, SL in Profit
- ✓ Platform Integration: WunderTrading & 3Commas ready
- ✓ Real-time Monitoring: Status table with fees & profit tracking

### 5-Step Quick Setup

1	<b>Set Direction</b> LONG (profit when price goes up) or SHORT (profit when price goes down)
2	<b>Set Order Sizes</b> BO Size: \$1000 (initial entry)   SO Size: \$1000 (safety orders)
3	<b>Configure DCA Ladder</b> SO Number: 5   Price Dev: 0.5%   Vol Scale: 1.5   Step Scale: 1.05
4	<b>Set Take Profit</b> Enable TP: 1.5% (exit when position reaches +1.5% profit)
5	<b>Select Entry Strategy</b> MeanReversion (recommended for beginners - enters on oversold conditions)

# Settings Overview

## Entry Strategies

Strategy	Description
MeanReversion	Enters when price touches Bollinger Band + RSI oversold/overbought
TrendPullback	Enters on pullback during trend with MACD/MA confirmation
Breakout	Enters on range breakout with volume + squeeze filter
MicroBreakout	Fast Donchian channel breakout (short lookback)

## Exit Options

Exit Type	Description
TP %	Exit at X% profit from average entry
Trail TP	3-stage trailing: ARM → BUFFER → TRAILING (maximizes profit)
TP at Price	Exit at specific price level (e.g., \$100,000 resistance)
SL %	Stop loss at X% loss from average entry
SL in Profit	Lock minimum profit (e.g., exit at +0.5% if price drops)
TP@LastSO	Close position instead of filling the last Safety Order

## Status Table

The on-chart status table shows real-time information:

<ul style="list-style-type: none"><li>• Status (ON/OFF/PAUSED)</li><li>• Invested USD / Position Size</li><li>• Remaining Funds &amp; SOs</li><li>• AVG / TP Price</li><li>• Unrealized PnL (% and USD)</li></ul>	<ul style="list-style-type: none"><li>• Next SO Price</li><li>• Direction / Strategy</li><li>• TP / Trail / SL settings</li><li>• Fees (Buy / Funding / Sell)</li><li>• Total Realized Profit</li></ul>
---	---

## Recommended Settings

Setting	Scalping	Swing	Position
Timeframe	15m - 1h	1h - 4h	4h - 1d
TP %	0.5 - 1.0%	1.5 - 2.5%	3 - 5%
Trail TP	0.5/0.3/0.1%	1.0/0.5/0.2%	2.0/1.0/0.5%
SL %	2%	3 - 5%	5 - 10%
SO Number	3 - 5	5 - 8	8 - 10
Price Dev	0.3 - 0.5%	0.5 - 1.0%	1.0 - 2.0%

### ⚠ Important Notes

- Always backtest before live trading
- Start with small position sizes
- Never trade with money you can't afford to lose
- Monitor positions actively
- Past performance ≠ future results

### Want the Full Manual?

The complete User Manual includes:

- ✓ Detailed parameter explanations
- ✓ Trail TP 3-stage system deep dive
- ✓ WunderTrading & 3Commas setup guides
- ✓ Formulas, examples & troubleshooting
- ✓ Advanced strategies & best practices
